

QCPColormapData::operator=

QCPColormap::selectTest

QCPColormapData::isEmpty

```
graph LR; A[QCPColormapData::operator=] --> C[QCPColormapData::isEmpty]; B[QCPColormap::selectTest] --> C;
```

The diagram illustrates a dependency or call relationship. Two source functions, 'QCPColormapData::operator=' and 'QCPColormap::selectTest', are shown on the left. Arrows from both of these functions point to a single target function, 'QCPColormapData::isEmpty', which is highlighted with a gray background. This suggests that both source functions interact with or call the target function.
