

QCPColormapData::clear

QCPColormapData::operator=

QCPColormapData::QCPColormapData

QCPColormapData::setKeySize

QCPColormapData::setValueSize

QCPColormapData::setSize

```
graph LR; A[QCPColormapData::clear] --> E[QCPColormapData::setSize]; B[QCPColormapData::operator=] --> E; C[QCPColormapData::QCPColormapData] --> E; D[QCPColormapData::setKeySize] --> E; F[QCPColormapData::setValueSize] --> E;
```

The diagram illustrates a central method, QCPColormapData::setSize, which is the target of five other methods from the QCPColormapData class. The methods are arranged vertically on the left: clear, operator=, QCPColormapData (the constructor), setKeySize, and setValueSize. Blue arrows point from each of these five methods to the central setSize method, which is highlighted with a grey background.
